

Our new Recharge custom branded parasol umbrella is a brand new addition to our umbrella range. This is probably the most exciting product we have launched especially due to the current load shedding crisis we have currently in South Africa.

Our Recharge custom branded 2m x 2m umbrellas is South Africa's first umbrella which has a solar mounted panel on top with a built in charging station. Forget about load shedding, relax under your custom umbrella while charging your mobile phones or power banks! Our Recharge has one more trick up its sleeve as it is part of our new Twist Lock umbrella range. The innovative Twist Lock system secures the umbrella in an open position without the need to use locking pins. Simply push up the umbrella, twist the Oplock turn dial, umbrella height stays in place, you are all done!

Our custom branded Umbrellas are digitally UV printed in high resolution on high quality durable water resistant 260gsm canvas in full colour. Our UV print process features our exclusive 2 year anti fade warranty. Our exclusive Smart Shade Deluxe frame construction is full aluminium, inherently rust proof, lightweight and come standard with a slip cover for protection when its closed. Our Parasols come standard with a 35kg concrete base, however if you have tables with inserts in and don't require the base then the base price can be deducted. If you will be moving your umbrellas around allot we suggest looking at our optional lightweight Plastic Moulded Water Base which weighs 30kg once filled with water or our trolley base with castor wheels.
